

# SEAL Systems Integration for SAP® PLM

## PLM cFOLDERS ..... COLLABORATION FOLDERS

// SEAL Systems is offering various enhancements to SAP cFolders. These offerings include conversion, extended viewing and printing functionality. The foundation of these enhancements are SEAL standard components and project specific implementation.

The screenshot displays the SAP mySAP PLM cFolders web interface. The top navigation bar includes 'Home', 'Refresh', 'Search', 'Favorites', 'Settings', 'Help', and 'Logout'. The main content area is titled 'Folder Ordner 1' and shows the current path as 'TestJEG > Ordner 1'. Below this, there is a form for editing the folder's name (currently 'Ordner 1'), a 'Subscribe' checkbox, and an 'Authorization' dropdown set to 'Administration'. A 'Save' button is visible. Below the form, a table titled 'Folder Contents' lists the files within the folder. The table has columns for 'Thumbnail', 'Name', 'Current Version', 'Status', 'Changed by', and 'Changed on'. Three files are listed: 'New Here 2' (SEAL\_Kalender\_2010.pdf, 60KB), 'TestJEG20110304', and 'TEST\_PDF\_DVS\_LaderABAP' (formattabelle.pdf, 7KB).

Thumbnail	Name	Current Version	Status	Changed by	Changed on
	New Here 2	SEAL_Kalender_2010.pdf (60KB)	✓ FG	Jens Göllnitz	04.03.2011 13:30:11
	TestJEG20110304			Jens Göllnitz	04.03.2011 15:00:17
	TEST_PDF_DVS_LaderABAP	formattabelle.pdf (7KB)		Jens Göllnitz	04.03.2011 13:31:58

## PLM cFolders

### ::: STAMPING OF ORIGINAL FILES WHEN EXPORTED FROM SAP DMS INTO cFOLDERS

When exporting from the SAP Document Management System, original files can get various stamps.

### ::: CONVERSION OF DOCUMENTS DURING STATUS CHANGE IN cFOLDERS

If an user changes the status of a document or status of a folder via the cFolders user interface, then thereby activate a configured user action for the status change. The action can be used for conversion of original files into other file formats.

### ::: GENERATION OF THUMBNAILS WHEN CHANGING DOCUMENT VERSION IN cFOLDERS

When changing the content of a cFolders object for example the document version, a thumbnail can be generated. For example a picture of the first page of a PDF file.

### ::: MULTIPAGE CONVERSION OF ORIGINAL FILES

Multiple files can be collected and converted into a multipage PDF.

### ::: PRINT FROM cFOLDERS

For this solution, an additional button can be inserted into user interface. By using this button, selected folder objects are collected in a plot order and printed by a configured output device.

### ::: EXPORT OF ORIGINAL FILES FROM cFOLDERS

By using of an additional button, the original files of selected documents of a folder can be exported to the local file system.

### ::: STAMP OF ORIGINAL FILES WHEN VIEWING

User defined stamps or watermarks can be inserted into original files when viewed or when printed. This is also achieved using an additional button which is inserted into the cFolders user interface.
