

FACTSHEET

Stamp & View for SAP® Records Management

➔ DIRECT DISPLAY AND VIEWING OF ADDITIONAL DOCUMENT INFORMATION

// RM View provides SAP-System information when documents are viewed. This ensures reliable document pipelining as well as output distribution tracing. SAP-context object, folder and/or user information is added dynamically to the documents in the form of stamps and watermarks, prior to viewing. The same goes for viewing tool printing processes (e.g. Acrobat Reader) where the information can be visible on the output medium. The displayed information is dynamic and adjusts according to individual content. This can be configured easily and adapted to specific requirements.

The screenshot displays the SEALSYSTEMS interface for SAP Records Management. On the left, a 'Role-Based View' sidebar shows a tree structure with folders like 'SEAL Demo RMS', 'Records', 'Record Models', and 'Documents'. Below this, an 'Activities' menu is open, listing options such as 'Display', 'Layouts', 'Change', 'Delete', 'Other Functions', 'Attribute List', 'Document Distribution Cl...', 'SEAL/RECORD2GO', 'RM Convert', and 'RM View'. The main window shows a document hierarchy for 'Druckerei Liefgut' with columns for 'Tech...', 'S..', and 'Element Type'. A secondary window titled 'Z60(1)/600 Records Browser - Record "Druckerei Liefgut" Edit' is overlaid, showing a detailed list of document elements with checkboxes and descriptions.

Stamp & View for Records Management

::: BENEFITS

ISO 9000 compliant and conformant document management and pipelining also when viewing. TIFF and PDF documents are consistently viewed with their valid context data. Said data is also always given by the Viewer during print functions. Errors are avoided and document traceability is guaranteed.

Thanks to uniform configuration, the type and contents of the additional information applying to PDF and TIFF documents is one and the same, and is valid for all corresponding viewing applications

::: LAYOUT PARAMETERS

They can be set via an editor with preview functions.

Text features

- Character type (font), over 50 font selections available
- Character size
- Color
- Line width
- Character pitch and spacing
- Text alignment (center, left or right)
- Mirrored texts

Stamps and Watermark features

- Position and size
- Angle of the stamp or watermark
- Frames (yes/no)
- Frame color
- Stamp or watermark with scaling or rotation mark
- Content definition via meta-file (graphic)
- Delete stamp background or only text background
- Stamp or watermark repetition available for overall document lines and/or columns.

The actual date and time can be output in the DD..MM.YYYY HH.MM.SS format.

::: ORIGINAL FILE FORMATS

- PDF
- TIFF/G4
- Further formats (Office/CAD) available

::: VIEWERS

- Acrobat Reader
- SAP Viewer, EAI/ECL, Imaging, Imagenation
- Other PDF viewing tools
- Other TIFF viewers

::: CONFIGURABLE STAMP DATA

- Document attributes
- Date/time
- Environment variables
- User data
- Text elemente
- Record attributes
- Case attributes

::: CONFIGURABLE USEREXITS

- For the identification of stamp data
- For the identification of additional process and view functions

::: SAP-INTEGRATION

Über Service Provider des SAP Records Managements

::: SAP INTEGRATION

Via SAP Records Management service provider.

::: RELATED PRODUCTS AND OPTIONS
